

Dubai Population

Bulletin

2007

1 – Population in Dubai

1.1. Population Size⁽¹⁾

Population in Dubai in 2007 is estimated at 1,529,792, of which 1,164,576 are males (76.13%) and 365,216 are females (23.87%). This difference in proportion between males and females (319 males for 100 females) is due to the large number of male labourers who have entered the emirate without their family members as shown in the following table:

Table (1): Population by Gender - 2007 ⁽²⁾

Gender	Population	%
Male	1,164,576	76.13
Female	365,216	23.87
Total	1,529,792	100

1.2. Estimate of Active Individuals During the Day

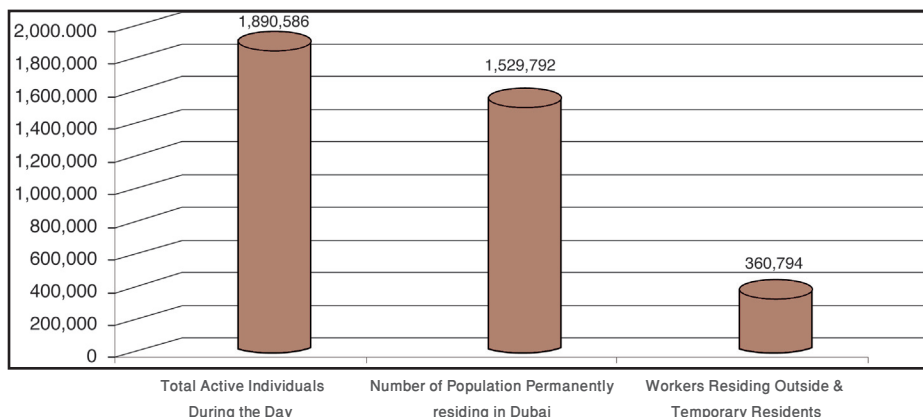

The daily number of active individuals in Dubai is estimated at 1,890,586 which includes residents, workers commuting from outside the emirate, and the average number of tourists and sailors. This daily increase in population is due to:

- Availability of various investment opportunities in Dubai which necessitate the daily movement of people from other emirates to manage their own businesses or to work for others.
- Residency of proportion of both Dubai public and private sectors employees in neighbouring emirates due to shortage of unoccupied housing units in Dubai and cheaper accommodation cost in these neighbouring emirates.

Chart (1): Active Individuals' Movement During the Day in Dubai - 2007.

2. Distribution of Permanent Residents by Age Groups

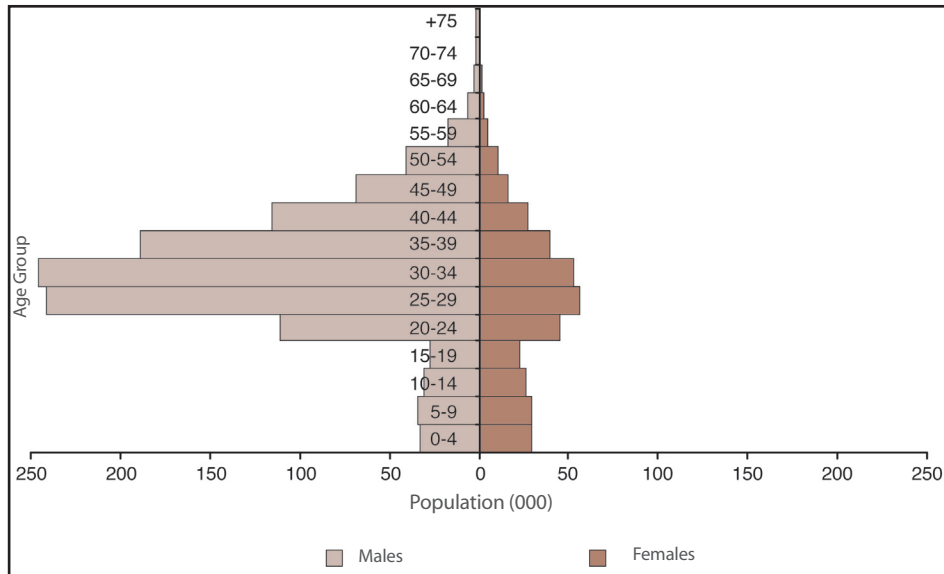

The (30-34) age group has the highest number of individuals 298,371 which represents 19.50% of total population, followed by the (25-29) age group with 297,833 individuals and a percentage of 19.47% of total population.

Moreover, the (35-39) age group comes in the third place with 227,928 individuals and a percentage of 14.90% of total population. The high number of individuals in those three age groups can be explained by the increasing number of expatriate labour workers that is caused by the accelerated economic growth of Dubai.

3. Population Distribution by Sector

Dubai is divided into 9 sectors of which 1 to 6 are urban and 7 to 9 are rural. In light of the population distribution according to main sectors in 2007, it is clear that the highest population concentration is in sector 3 with 593,138 residents and 38.77% of total population, followed by sector 2 with a concentration of 401,592 residents and 26.25%, while sector 1 comes in the third place with 318,568 residents and 20.82% of total population. In addition, the rural population (sector 7 to 9) has 18,369 residents and 1.2% of total population as shown in the table below:

4. Distribution of Population by Community

As described in table (5) below, Al Muhaisanah second (264) has the highest number of population with 202,049 individuals that represents 13.21% of Dubai population. This community is followed by Al Quz Industrial second (365) with 82,584 individuals and a percentage of 5.40%. Moreover, Jebal Ali (500) comes in the third place with a population size of 75,284 individuals and a percentage of 4.92% preceding the Jebal Ali Industrial (599) that has a population of 68,698 individuals and a percentage of 4.49%. These four Dubai communities together have a population size of 428,615 individuals and represent 28.02% of the total population size of Dubai. Those later figures can be explained by the presence of several labor accommodation camps in the above mentioned communities.
